Education

B.S. Computer Science, Mathematics Minor

May 2017

University of Portland, Portland, Oregon

Coursework: Computer Networks, Artificial Intelligence, Computer Graphics, Analysis of Algorithms, Statistics & Probability, Linear Algebra

Technical Skills

Languages/Frameworks: Java, C, JavaScript, AngularJS, Python, Django, C#, OpenGL

Tools: Unix, Shell, Git, Emacs, Visual Studio, Unity, Blender, Bootstrap

Projects and Accomplishments

UP Ride Finder: Web-based system for coordinating long distance ride sharing.

- Presented in-progress and final product to a large group of peers, professors, and community members over the course of development.
- Built using Python and Django for back-end, and HTML, CSS, and JavaScript for front-end.
- Pulls from Google Places API to resolve ZIP codes into city names and maps.
- Version control done through GitLab.

ready-bot: A ready-check bot for Discord servers.

- Built using JavaScript and the Discord JS framework.
- Deployed on Heroku with automatic builds from GitHub and CI testing through Travis CI.

Rolling Plan Interface: Simultaneous multi-user mill scheduling tool.

- Built using ag-Grid on AngularJS querying a Spring back end.
- Allows multiple users to view live data but only one user to modify at a time.
- Dynamically fills out time fields for "Mill Down" segments.

Miscellaneous:

- Eagle Scout, earned June 2013.
- Proficient in 8 instruments and 3 spoken languages.
- Able to solve a 3x3 Rubix cube, best solve time 57 seconds.

Experience

Software Engineer

Nov. 2017 - Present

EVRAZ North America, Portland, OR

- Create and maintain mill production tools for internal and external users.
- Collaborate directly with customers to design and refine application functionality and interfaces.

Industrial Math Intern

Jan. 2016 - May 2016

PIC Math, Portland, OR

- Analyze hydroelectric optimization models used in the Pacific Northwest.
- Create more accurate optimization models using linear programming in Xpress-Mosel.
